

e)SYS

Visual Management System

Online

Work from virtually any place with an internet connection!
Nothing to install!

Secure

Stored securely, your data stays with your company and not on employee laptops.

Up-To-Date

Always have the latest information at your fingertips with real-time data on all your bids!

Accurate and complete bid information is the foundation of any successful program. Estimating is a necessary and time consuming procedure and suppliers often have compressed lead-times to work on and complete their bids, which may result in shortcuts and costly mistakes.

e)SYS speeds up this process by bringing the bid online and allowing for shared, collaborative access; giving full visibility to outsourced requirements, and costs of manufacturing, materials, hardware and metal finishing.

Why e)SYS?

No need for additional hardware. Being a cloud-based system, you will not require any extra hardware or software beyond a regular computer and a web browser to run e)SYS.

Always have the latest version. We take care of the application updates and feature enhancements so your IT staff don't have to.

Share the workload. Multiple users can work on the same bid at the same time without any worry of overlap or passing files around. Enterprise edition users can also piece out bids to sister companies.

Reduce duplication. Vendor quotes are populated directly into e)SYS, saving your users from having to re-enter that data.

All editions of e)SYS include the following features:

- Upload your complete Bill of Material into e)SYS from Excel or similar spreadsheet
- Manipulate all data including labour, material, hardware and metal finishing
- Drag and drop notes, documents, emails, etc. from external devices into e)SYS
- View and edit data with your team from any location in real time
- Build, deliver and receive quotation packages to/from multiple suppliers for any commodity
- Load engineering, drawings and parts lists in any format and e)SYS will automatically distribute them to relevant line items for current and future bids
- Automatically construct comprehensive final estimates including all cost centres, burdens, G&A and profit for labour, materials and all outsourced requirements
- Customized reporting capabilities show bid status, parts accounting, buying/selling price summaries including buying/selling Bill of Material breakouts.
